LEGENDA OBJEKTŮ A PLOCH

- [illegible]

## POZNÁMKY A

- **HEAVY METALS** are any naturally occurring metallic elements with atomic weights greater than 20, such as lead, mercury, cadmium, copper, nickel, and chromium. These elements are found in the environment in various forms and concentrations. They can be toxic to humans and animals, and they can cause environmental damage.
- **ORGANIC POLLUTANTS** are chemical compounds that contain carbon. They can be natural or synthetic. Examples include pesticides, herbicides, fungicides, and insecticides. They can be toxic to humans and animals, and they can cause environmental damage.
- **INORGANIC POLLUTANTS** are chemical compounds that do not contain carbon. Examples include acids, bases, salts, and heavy metals. They can be toxic to humans and animals, and they can cause environmental damage.
- **BIODEGRADABLE POLLUTANTS** are pollutants that can be broken down by natural processes. Examples include organic waste, paper, and food. They are generally less harmful than non-biodegradable pollutants.
- **NON-DEGRADABLE POLLUTANTS** are pollutants that cannot be broken down by natural processes. Examples include plastic, glass, and metal. They are generally more harmful than biodegradable pollutants.
